Better Information

ready for your GIS

High quality geographic information (GI) is the platform for making informed decisions.

Environment Systems has an excellent track record in the capture and management of GI for government and corporate clients. Here are two recent examples;

London 2012 Olympics

- Captured all the land and property information for the bid
- Supplied GI for the preparation of the Compulsory Purchase Orders
- Supported the business relocation programme through mapping and analysis
- Have been working on the project since 2002 prior to the bid announcement

UK Main Rivers

- Worked closely with the Environment Agency to develop the main rivers database in preparation for nationwide analysis
- Captured over 40,000km of waterways
- Delivered all data to time and quality
